

JOB DESCRIPTION

TYPESCRIPT SOFTWARE ENGINEER

We are looking for an talented Software Engineer to join our team in Lausanne, Switzerland. Your main focus would be on developing the desktop and mobile applications for our core product SILO, a digital asset management solution designed for financial institutions.

You would be working a modern TypeScript, React and React Native stack and collaborate with experts in cutting-edge technologies relative to blockchain, hardware security and cryptography. Your contribution would have a direct impact on the evolution of the cryptocurrency/fintech industry as we know it today.

Requirements

- Strong knowledge of modern JavaScript (ES6+) and preferably TypeScript
- Proficient in React (functional components, hooks, context, reconciliation, etc.) and experience with state management library, Redux preferably
- Knowledge of frontend tooling (Babel, Webpack, ESLint, Prettier)
- Participate in code reviews, SCRUM

Desirable

- Experience with ElectronJS
- Experience with React Native, or interest in learning and use regularly
- Good knowledge of NodeJS
- Comfortable with cryptography concepts, blockchain knowledge is a plus
- Comfortable with Docker, Google Cloud Platform
